That's a good question. Perhaps I was hasty in making that assumption. I guess I was thinking more of urban centers having a different water quality composition. I think we may have a some other options, but I'll continue to think about this, too (and check in with those who might offer guidance).

Thanks, I'll let you know how it goes!

Best,

Leanne

Hmmm. Ok. I'm surprised to hear about the distinction you are making between Phase 1 and Phase 2 water quality data. Not quite sure about the scaling question...is there a reason that a sample collected from a 10 acre residential watershed in Phase 1 community would not intrinsically be representative of a sample collected from a 10 acre residential watershed in Phase 2 community?

Good luck in your stormwater quest! There are numerous ways to account for and quantify that little rascal. If there is anything we can do to help, please let me know.

Best,

Chris

Hi Chris,

Thanks so much for sending this my way. We're Phase II permittees down here, but I'll look around and chat with our stormwater folks to see what might exist that is similar.

I do remember coming across the Data Characterization report a while ago, but had disregarded it since it was for Phase I. I wonder if there is a way to scale down or make adjustments so the data would mimic a Phase II. Ideas to ponder...

Thank YOU Chris. Our conversations are always a pleasure!

Best,

Leanne

Here are a couple handy regional links (I hope).

<http://www.ecy.wa.gov/programs/wq/stormwater/municipal/s8dswmonitoring.html>

<https://fortress.wa.gov/ecy/publications/documents/1503001.pdf>

<http://www.ecy.wa.gov/programs/wq/stormwater/municipal/rsmp/rsmp.html>

Great conversation today....and as always THANK YOU for all the great work you do. ☺

Best,

Chris
